

Don't Wait for a Disaster to Happen. Get an IT Network & Security Audit Today.

PCS encourages fellow Chamber members to get a thorough **network and security audit** to help identify hidden problems with your IT that could turn into bigger, disastrous events that could cost you thousands in lost productivity, downtime, and computer repair bills.

Here are a few items our team will look for during the audit:

- Viruses, ransomware, and other security risks that may allow hackers into your network
- Hidden conflicts and problems on the network that could turn into bigger issues
- Needed software updates and security patches
- The integrity of your data backup solution
- Slow, unstable PCs
- Failing or potentially failing hardware
- And much more!

Start doing IT the proactive way.
